

**ELARAST** photobioreactor is ideal for phototrophic organisms as moss, microalgae, bacteria and plant cells under optimum conditions. The spectrum is selectable and the light intensity is dimmable from 0-100% up to 3000  $\mu$ mol(photon)/m². Turbidostat mode via turbidity sensor.

**ELARA st** typical applications includes the following:

Education & Basic research

Scale-up and scale-down studies

Process development and optimization

**ELARA St** can be used for:

Algae

Phototrophic bacteria

Plant cells

High power **LED lighting,**spectrum selectable
and
dimmable 0-100%

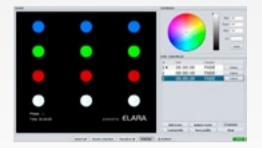

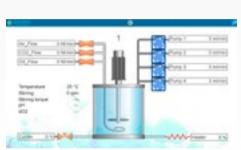

2

# STIRRED AUTOCLAVABLE PHOTOBIOREACTORS

# **ELARA** ST

### **Benefits**

Up to **24 units** managed with one HMI with **innovative PARALLEL process control** LEONARDO: smart controller designed to provide an high level of automated management of the fermentation processes Batch, Fed batch or continous processes

Different gas mixing strategies with up to 5 TMFC Various controller and hardware configurations enable aeration strategies using air, oxygen, nitrogen or a mixture of these to enrich the air. The mass-flow controller allows the exact flow rate control of individual gases. The flexible aeration options integrated in the fermenter/bioreactor permit a wide range of different application giving to this system a substantial versatility.

Thermal Mass Flow Controller in entry model Gas mixing through TMFC and solenoid valves or numbers of TMFC Automatic gas mixing algorithms Toro and sintered spargers

23" (single unit) or

27" (multi system) multi touch HMI.

Remote control via PC, tablet and smartphone for process management and after sale assistance

LEDA safe sterile sampling system
The needle free connector is designed to reduce the risk of contamination during sampling.

The sterile combination of a syringe (3-5-10-30 ml) and a non return valve guarantees the sterility after sampling until the next use.

Safety: pressure releaf valve included in each unit.

Compact and modular PCS (350x350x350 mm)

N.4 assignable Watson Marlow pumps, all speed controlled in entry level

Additional External modular box:

OD, dCO2, weight, thermobox, peristaltic pumps

Fully removable and cleanable jacket

4

### Modbus Hamilton sensors

### Why a digital sensor?

Hamilton sensors (including Cell Density) has been integrated into Solaris PCS and Leonardo software giving the user the benefit of having a unique platform.

Fully compensated digital sensors, store and transmit all relevant sensor data, including calibration and diagnostic information directly to Solaris Leonardo software.

## Reducing background noise

The electrolyte of the EasyFerm Bio sensors is prepressurized to prevent the diffusion of sample into the sensor. The Everef-F reference cartridge ensures that the reference electrolyte remains free of silver and precipitation of proteins.

#### dO2

The VisiFerm DO is the first optical oxygen sensor with integrated optoelectronics. The visiFerm requires less maintenance than a classical oxygen sensor as it does not have a mechanically sensitive membrane or a corrosive electrolyte.

#### ORP

The ORP sensor through a pre-pressurized reference electrolyte has a clogfree diaphragm.

The sensor ensures a stable measurement signals after steam sterilization, autoclavation and CIP cleanings gith almost drift-free measurement.

#### Conductivity

All wetted conductivity sensor parts are FDA approved, can be cleaned easily and withstand CIP cleanings and autoclavations. The sensor shows a very good linearity over a broad measuring range.

### Leonardo 2.0

### **USER-FRIENDLY SOFTWARE**

The software is the user's best friend in experimental design planning and performing trial runs, as well as analyzing and optimizing media and parameters for cultivation.

The graphical user interface enables you to select the software functions intuitively. Data extracted are compatible with Windows Excel. However, Solaris has developed Leonardo data viewer, a platform where to easily and quickly manage fermentation data The software is included in the fermenter supply and can be installed on unlimited number of client's PC or laptop.

### Do it parallel: smarter..faster

Leonardo can be used for process development (i.e. time-saving · parallel fermentation approaches) Up to 24 indipendent fermentations/cultivations can be carried out simultaneously.can be carried out simultaneously. ## Chiller

- Optionally ELARA can be equipped with a chiller for heat removal from your culture minimizing lab water usage
- Using this system you don't need a water supply line in your lab
- Cost-effective cooling of fermenters
- Easy operation
- Refregerant level monitoring
